## **Automatisme:**

Factoriser: 
$$f'(x) = 3x(2x+1)-4(2x+1) = (2x+1)[3x-4]$$

Puis, en déduire le signe  $\det f'(x)$  .

| x                        | $-\infty$ |   | $-\frac{1}{2}$ | 0              | $\frac{4}{3}$ |   | $+\infty$ |
|--------------------------|-----------|---|----------------|----------------|---------------|---|-----------|
| (3x-4)                   |           |   |                | _              | 0             | + |           |
| (2x + 1)                 |           |   | 0              | 2x0+1 = 1<br>+ |               | + |           |
| f'(x) = (3x - 4)(2x + 1) |           | + | 0              | _              | 0             | + |           |
